## Project Title: Darknet Market

I will build a website introducing Darknet Market and exploring what drives these markets through analyzing supply and demand. I want the website to have archaic website ambience but still be easy to navigate and aesthetic. The website will have 6 pages with a unifying theme and the same template and a navigation bar.

Pages will include:

- **What is it?** (introduction page) This page will introduce what darknet is and some example usages.
- **History** This page will show the timeline, rise and fall of a few example darknet markets.
- **Supply and Demand** This page will include charts, images of items that get sold and where it gets sold the most.
- **Visual Analysis** This page will include graphs and visualizations of supply and demand.
- **Exploration** This page will have commentary and some example research pages exploring the concept of these markets
- **Sources** This page will include a list of sources.
